

総合問題演習

【総合問題演習第1回】

以下の英文を読んで、以下の設問に答えよ。

Why is our earth the kind of planet it is? Not only because it is full of a number of things. Not only because some parts are more full of things than others. (1) because the things in it are related. The earth is like a watch. There's nothing accidental about the mechanism of a watch. Each part is a working part and each is absolutely necessary to make the watch go. (2)Furthermore, the watch can go only when each part is properly connected with other parts.

All the parts of the earth are likewise working parts, and are necessary to make it "go." Consider physical features such as the Grand Canyon of the Colorado River and Mt. Fuji, in Japan. They are the result of relationships between the land, the water, and the air. (3)These relationships started millions of years ago and have continued to this very day.

There's another way in which the earth resembles a watch. It's a precision instrument. Unlike a watch, it shows no sign of running down or stopping. "Seed time and harvest, and cold and heat, and summer and winter, and day and night" continue to arrive, on time.

How do we understand how a watch works? Only by knowing what use each spring, gear, and wheel serves, and how the parts hang together. In the same way, we can understand how our world works only by getting to know the parts and the relationships between them.

(4)This, however, is not easy, (5)even if it could be done at all. (6)For there are far more working parts to the earth than to a watch or any other precision instrument. Nobody yet knows exactly how many working parts there are. After all, some parts of the world are still barely known. Large areas of Antarctica remain unexplored. So are large areas of the atmosphere and the oceans, both of which are at work all the time cooling and warming, drying and moistening the land surfaces of the earth. Then again, some of the relationships between the known working parts are not fully understood.

以下の英文を読んで、以下の設問に答えよ。

Human beings are the highest product of evolution. Human intelligence is far superior (1) that of any other organism. In structure, the human body is closely related to those of the chimpanzees, gorillas, orangutans, and gibbons. (2)But this does not mean that human beings evolved from any of these apes*.

From their study of fossils, scientists think that ancient humans and apes had common ancestors millions of years ago. Apes and humans evolved in different directions and became adapted to different ways of life.

More fossils of early human beings are being discovered each year, and accurate ways of dating them are being developed. But scientists still do not know the complete story of human evolution.

In Africa, scientists have discovered human fossils that are believed to be more than 2,000,000 years old. Among some of these fossils, simple tools have been found. Thus scientists know that those prehistoric people could make tools. (3)They no doubt were able to show their children how to make tools and how to use them.

The bodies and brains of early human beings slowly evolved. They made better tools and weapons and became skillful hunters. Gradually they learned to talk with one another. They discovered fire and learned how to make it.

Human beings have had their "modern" form for about 100,000 years. If some of the first "modern" human beings were dressed in modern clothes, you would not notice them on the street. But the Neanderthal humans, who had developed in a parallel line, became extinct about 30,000 years ago. They apparently could not compete successfully with the direct ancestors of modern humans.

For thousands of years, people lived in caves, on open plains, and in jungles. (4)Gradually they began to train animals and grow plants for their own use. In time, they began to keep records of their history. (5)They are the first and only beings to seek out their own evolutionary history.

注) *ape 類人猿

【総合問題演習第3回】

以下の英文を読んで、以下の設問に答えよ。

"Do you think that American culture has influenced Japan positively?" An American man, sitting next to me at a party, asked me this question. I gave him a commonplace answer like, "(1)Some Japanese think that the American influence has been positive, but others think that it has been negative." The look on his face told me that he had gotten similarly unsatisfactory answers from other Japanese. To him, the word "you" meant "you yourself, but to me, because of group harmony, "you" meant "you Japanese." I was accustomed to making a general comment rather than a personal one. In Japan, I seldom had a chance to express my personal opinions. On those rare occasions, I tried to state neutral, harmless opinions. (2)Otherwise, expressing contrary opinions would cause disorder, and I was afraid of being excluded from the group. However, Americans learn in elementary school to speak out. In that culture, having no personal opinions is a sign of incapability.

I answered, "Well, let me see. American culture has raised women's status in Japan, and I (3) that very much. Women have become more able to display their abilities." Still, I wasn't truly satisfied with my comment because it was so ordinary.

After that incident, I was still apt to give general responses by saying "We Japanese..." When asked, "What do you think about international marriage?" I replied, "We Japanese are conservative - so, generally speaking, parents object to international marriage." There again, I heard the irritation in the American man's voice: "I'm asking for your personal opinion." His facial expression was strong enough to break through the Japanese wall of ambiguous expressions, and I said: "If the two people understand and love each other, who cares about nationality?" Then, softly he inquired, "If your parents objected to your own international marriage, what would you do? In the U.S., parental permission is not necessary, but in your country you need it, right?" I answered: "Right, but not legally. (4)I would try to persuade my parents to give me permission. As a Japanese, I don't think my parents and I are completely separate beings with different personalities." He continued: "If your parents persisted in objecting, what would you do?" I replied: "My parents say that if the man had a warm personality and could communicate with them in Japanese, they would allow the marriage (5). Despite the many cultural differences, I would make every effort to win my parents over."

Through free interchange of opinions, the conversation developed smoothly. By encouraging further frank give-and-take, we were able to understand and appreciate each other's culture better.

【総合問題演習第4回】

以下の英文を読んで、以下の設問に答えよ。

Many people believe that because the automobile is in such general use in America it was invented in the United States. That is not true. The gasoline motorcar that we know began in France and Germany.

(1)What Americans did invent was a method of manufacturing cars in such numbers that in the end they led the world in production, producing some seventy-five percent of all the world's cars.

One reason why motoring began in Europe and, at the start, progressed more quickly there was that the roads were so much better. In no branch of social and economic development was the United States so far behind Europe as in its roads. There were a number of reasons for (2)this.

In Europe the hard base for thousands of miles of good highways had been laid by the Romans hundreds of years before; it was there, ready to be later built up into fine smooth surfaces by engineers. Second, distances there were not very great, and the large number of towns and villages all quite near one another made roadbuilding economical.

(3)In the great unpeopled spaces of the American continent, on the other hand, it was easier and cheaper to use the rivers and lakes and to make canals or put down railroads.

American roads had their beginning in the paths used by Indians or those stamped out by cattle. (4)Most of them became seas of mud when it rained, and could then be used only if logs had been laid across them.

So it is not hard to understand why most Americans did not see, as they watched the first few automobiles "speeding along town streets at ten or fifteen miles an hour, anything to get very excited about. To people like farmers it seemed that the car could never take the place of the horse. After all the horse had its own power plant, it needed only what was grown on the farm and it gave back to the farm the best possible natural fertilizer.

To overcome this feeling about the horse an automobile would have to be more than good - it would have to be easy to operate, easy to mend, able to climb hills and travel over very bad road surfaces. Above all, it had to be cheap.

The answer came, in 1908, in a machine which Henry Ford called his "Model T." (5)With it was born a completely different way of life.

【総合問題演習第5回】

以下の英文を読んで、以下の設問に答えよ。

We have all experienced days when everything goes wrong. A day may begin well enough, (1)but suddenly everything seems to get out of control. What invariably happens is that a great number of things choose to go wrong at precisely the same moment. It is as if a single unimportant event set up a chain of reactions. Let us suppose that you are preparing a meal and keeping an eye (2) the baby at the same time. The telephone rings and this marks the prelude to an unforeseen series of catastrophes. While you are on the phone, the baby pulls the table-cloth off the table, smashing half your best pots and jars and cutting himself in the process. You hang up hurriedly and attend to baby, pots and jars, etc. Meanwhile, the meal gets burnt. (3)As if this were not enough to reduce you to tears, your husband arrives, unexpectedly bringing three guests to dinner.

Things can go wrong on a big scale as a number of people recently discovered in Parramatta, a suburb of Sydney. During the rush hour one evening two cars crashed into each other and both drivers began to argue. The woman immediately behind the two cars happened to be a learner. She suddenly got into a panic and stopped her car. This made the driver following her brake hard. His wife who sat beside him was holding a large cake. (4)As she was thrown forward, the cake went right through the window and landed on the road. Seeing a cake flying through the air, a truck-driver who was drawing up alongside the car, pulled up (5) of a sudden. The truck was loaded with empty beer bottles and hundreds of them slid off the back of the vehicle and on to the road. This led to yet another angry argument. Meanwhile, the traffic piled up behind. It took the police nearly an hour to get the traffic on the move again. In the meantime, the truck-driver had to sweep up hundreds of broken bottles. (6)Only two stray dogs benefited from all this confusion, for they greedily ate what was left of the cake.

【総合問題演習第6回】

以下の英文を読んで、以下の設問に答えよ。

One of the toughest aspects of the policeman's job is the fact that he must make on-the-spot decisions. (1)He must make up his mind "right now" without the luxury of thinking for too long, looking up information in a book, or asking a superior which course of action is best. The policeman is under real pressure; pressure which he can't avoid. The conflict occurs when some situation requires a decision which isn't easy; naturally, he would prefer not to have to commit himself to an action which may prove wrong. The wrong decision can lead to troubles like (2) severely criticized by his superior, or it can lead to unnecessary injury or death.

Take, for example, the case of the policeman pursuing an armed robber on foot in a crowded downtown street. The criminal fires on the officer, but should the officer return the fire? If he does, he may endanger the lives of the fleeing citizens. (3)If he doesn't, he may fail to arrest the criminal, or he may himself get shot. Assume the officer decides to return the fire; assume the robber is captured but some bystander is also wounded. The newspapers will no doubt bring pressure on the so-called "wild West ways of the police force.

Usually, the officer has no truly excellent alternatives; most of the on-the-spot decisions he must make are like the example: a choice of evils. No wonder the policeman is in conflict from the pressure to choose one evil through a quick decision and his real desire to get himself off the hook by avoiding the issue.

Because the officer is always on the hot spot and has to make choice-of-evil decisions, he may also feel irritated with people who don't have to stick their necks out. This understandable impatience with the luckier people who don't work under such pressure can actually lead to troubles between policemen and others with whom they must work, such as lawyers, judges, doctors and the like.

The best solution for the problem caused by the need for on-the-spot decisions would be to improve police training. (4)The job can't be changed, but the more knowledge and experience the officer can bring to the "hot spot," the better he will be able to make the right decision. Thorough training can make the policeman more confident of making correct decisions.

【総合問題演習第7回】

以下の英文を読んで、以下の設問に答えよ。

If you tell someone that you want to make a career as an actor, you can be sure that within two minutes the word 'risky' will come up. And, of course, acting is a very risky career. (1) for them. (2)Once you choose to become an actor, many people who you thought were your closest friends will tell you you're crazy, though some may react quite oppositely. No two people will give you the same advice. But it is a very personal choice you are making and only you can take responsibility for yourself and for realizing your ambition.

There are no easy ways of getting there - no written examinations to pass, and no absolute assurance that when you have successfully completed your training you will automatically make your way in the profession. It is all a matter of luck plus talent. Yet there is a demand for new faces and new talent, and there is always the prospect of excitement, charm and the occasional rich reward.

I have frequently been asked to explain this magical thing called talent, which everyone is looking out for. I believe it is best described as natural skill plus imagination - the latter being the most difficult quality to estimate. (3)And it has a lot to do with people's courage and their belief in what they are doing and the way they are expressing it to the audience.

Where does the desire to act come from? It is often very difficult to put into words your own reasons for wanting to act. Certainly, in the theater the significant thing is that moment of contact between the actor on the stage and a particular audience. And making (4)this brief contact is central to all acting, wherever it takes place - it is what drives all actors to act.

If you ask actors how they have done well in the profession, the response will most likely be a shrug. They will not know. They will know certain things about themselves and aspects of their own technique and the techniques of others. (5)But they will take nothing for granted, because they know that they are only as good as their current job, and that their fame may not continue.

設 問

以下の英文を読んで、以下の設問に答えよ。

Imagine not being able to read the newspaper or the classics; imagine not being able to write a love letter or jot down a shopping list. Millions of people throughout the world are handicapped by being sightless, and their need to read and write is vital. A solution to this difficult predicament* was found by the most unlikely of individuals.

Braille, the universally used method of writing and reading for the sightless, was invented by a fifteen-year-old French youth in 1824. The (1), Louis Braille (1809 - 52), who became blind at the age of three because of an unusual accident: his eyes were accidentally pierced while he was playing with his father's tools.

Despite his handicap, Louis Braille became an accomplished cellist, organist, and scholar.

(2)Like other blind individuals of his time, the methods of reading available to him were cumbersome at best. Inspired by French army captain Charles Barbier, whose system was invented in 1819 for military communication at night and was called "night-writing," young Braille reduced Barbier's twelve-dot configuration to a six-dot grouping, each composed of one to six embossed dots arranged in a six-position cell or matrix.

Louis Braille, a professor and former student at the Institute for Blind Children in Paris, published his results in 1829 and then again in a more comprehensive form in 1832. (3)Through a long period of fermentation* and modification by others, Braille, as a system of communication, achieved worldwide prominence and acceptance in 1916, when members of the U.S. Senate met with representatives* of the British government in London to approve the system. It is commonly referred to (4) Standard English Braille, Grade 2.

The basic Braille code has since been modified to represent mathematical and technical symbols as well as musical notation, shorthand, and other common languages. Young (5) in their own way.

注) * predicament 苦境 *fermentation 改良 *representative 代表者

以下の英文を読んで、以下の設問に答えよ。

There were once two people travelling on a train, a scientist and a poet. They had never met before, so naturally, there wasn't much conversation between the two. The poet was minding his own business, enjoying the passing scenery. (1)The scientist was very tense, trying to think of things he didn't know so he could try to figure them out.

Finally, the scientist was so bored, that he said to the poet, "Hey, do you want to play (2)a game?" (3)The poet, being content with what he was doing, ignored him and continued looking out the window, humming* quietly to himself. This got the scientist mad, who irritably asked again, "Hey, you, do you want to play a game? I'll ask you a question, and if you get it wrong, you give me \$5. Then, you ask me a question, and if I can't answer it, I'll give you \$5." The poet thought about this for a moment, but he decided against it, seeing that the scientist was a very bright man. He politely turned (4) the scientist's offer.

The scientist, who by this time was going mad, tried a final time. "Look, I'll ask you a question, and if you can't answer it, you give me \$5. Then you ask me a question, and if I can't answer it, I'll give you \$50!" Now, the poet was not that smart academically, but he wasn't totally stupid. He accepted the offer. "Okay," the scientist said, "what is the exact distance between the Earth and the Moon?" The poet, not knowing the answer, didn't stop to think about the scientist's question. He gave a \$5 bill to the scientist.

The scientist happily accepted the bill and promptly said, "Okay, now it's your turn." The poet thought about this for a few minutes, then asked, "All right, what goes up a mountain on three legs, but comes down on four?" The bright look quickly disappeared from the scientist's face. He thought about this for a long time, using his scratchpad and computer.

After about an hour of this, the scientist finally gave up. He unwillingly handed the poet a \$50 bill. The poet accepted it graciously*, turning back to the window. "Wait!" the scientist shouted. "You can't do this to me! What's the answer?" The poet looked at the scientist and (5)calmly put a \$5 bill into his hands.

【総合問題演習第10回】

以下の英文を読んで、以下の設問に答えよ。

Visitors to Britain are often surprised by the strange behavior of the inhabitants. One of the worst mistakes is to get (1a) a bus without waiting your turn in the line. The other people in the line will probably complain loudly! People respond to someone getting ahead in a line in an emotional way. Newspaper headlines describe anger at people who pay to bypass* a hospital waiting list to get an operation more quickly. Standing in line is a national habit and it is considered polite or good manners to wait your turn.

In recent years smoking has received a lot of bad publicity, and fewer British people now smoke. Many companies have banned smoking (1b) their offices. It is less and less acceptable to smoke in a public place. Smoking is no longer allowed on the London underground, in cinemas and theaters and most buses. It is considered bad manners to smoke in someone's house without asking "Would you mind if I smoke?"

(2)On the other hand, in some countries it is considered bad manners to eat in the street, whereas in Britain it is common to see people having a snack while walking down the road, especially at lunchtime.

(3)The British may be surprised to see young children in restaurants late at night because children are not usually taken out to restaurants late at night and, if they make noise in public or in a restaurant, it is considered very rude. About one hundred years ago, it used to be said "Children should be seen and not heard," since children did not participate (1c) all (1d) public life. In recent years they are playing a more active role and they are now accepted in many pubs and restaurants.

(4)Good and bad manners make up the social rules of a country and are not always easy to learn because they are not often written down in books. These rules may also change as the society develops; for example, women did not go into pubs at the beginning of the 20th century because it was not considered respectable behavior for a woman. Now both women and men drink freely in pubs and women are more integrated (1e) public life.

(5)We may think that someone from a different country is being rude when his or her behavior would be perfectly innocent in his or her own country. Social rules are an important part of our culture as they are passed down through history. The British have an expression for following these "unwritten rules": "When in Rome, do as the Romans do."

【総合問題演習第1回】

以下の英文を読んで、以下の設問に答えよ。

Suppose you were an absolute dictator and had the power to make any law you wanted to. What laws would you make?

The first law I would make would prohibit all advertising. Think how much better the world would be then! ⁽¹⁾The purpose of advertising is to convince people to buy things they don't need and didn't want until they saw the advertisement. You never see advertisements for things like potatoes or apples. Without advertising, (2), and we would all be wealthier. Of course, a few million people making their living by producing unnecessary things - including advertisements - would lose their jobs. ⁽³⁾We'd have to help them find some honest work. A nice side effect of the abolition of advertising is that trash television and trash magazines which are supported by advertising would disappear. The world would become quieter, and we could begin to recover the dignity that advertising has stolen from us. We might even be able to recover our aesthetic sense of design and color. And, by saving paper, millions of hectares of the world's forests would be saved.

Then I'd make a law against private automobiles, at least in big cities. Within days or even hours after the automobiles disappeared, people would see the bright, clear sky again. At night, you could see the Milky Way* even in Tokyo, Los Angeles and Mexico City. People could get around by trains and bicycles, and by walking. Everybody would be healthier, and fewer people would be overweight. No more big traffic accidents, no more oil wars. Of course, private automobiles might disappear naturally after advertising is abolished.

And of course, I would make a law prohibiting the mining, manufacture, possession or sale of radioactive material. ⁽⁴⁾I would rid the Earth of all such material by sending it up in rockets aimed at one of the black holes in outer space. To make sure the rockets reached their destination I would have each one manned by a crew of ten nuclear engineers.

Then I would make a law abolishing the right of belligerency*. Anyone who wants to fight a war would have to do it on his or her own responsibility. No hiding behind the myth of the State. ⁽⁵⁾If you shoot somebody, even if you are a soldier, you will be arrested, and have to prove in a court of law that you did it in self-defense. The same would be true for politicians who order someone to shoot someone. Of course, with a law like that just about every president and prime minister in the world would be in jail.

Those are the first laws I would make if I were a dictator. What law would you make? Let me guess: a law against dictators.

注) *the Milky Way 天の川 *belligerency 交戦

【総合問題演習第12回】

以下の英文を読んで、以下の設問に答えよ。

This is a story of honesty, sheer good luck, and unbelievable initiative. My friend Tom cycled the 10km from Yoyogi to Kichijoji to start a heavy day's teaching for a language school. (1)No sooner had he arrived there, however, than he was on the telephone. "I've lost my bag," he said. "It's got everything in it!"

This, it seems, happens quite a lot here. (2)Some foreigners are very careless because they automatically expect that because they are in Japan anything they lose will be returned.

Tom wanted me to cycle around the neighborhood to see where the black, leather bag might have fallen from his bicycle.

"(3) it?" I said to him.

"No," he said. "I left in a hurry and cycled off with it balancing on the back."

There was one thing in his favor. He lived in Japan.

"Well," I said to lift his spirits, "because you're living in Japan (4)the chances are very good that you'll get your bag back. In fact, they are excellent."

"I hope so. God, I hope so," said Tom.

True to my prediction, when the phone rang again about an hour or so later, it was a young Japanese named Daisuke Takakawa, calling to say that the bag was in his hands. (5)While on her way to work, his mother had spotted it on the top of a heap of garbage and had taken it to the local police box only to find it closed. "It looked too valuable to be there," she told her son when she took it home.

"What, the garbage?" he asked.

"No, the bag," his mother replied. "It's a very nice one."

Daisuke Takakawa searched its contents, found a telephone number, and dialed it immediately.

That's when I came into the picture. I met Daisuke Takakawa at Yoyogi Station and he handed the bag to me.

Tom's luck was that his bag had been spotted by a woman with a sharp eye for good things. (6)His next bit of good fortune was that Daisuke spoke superb English and, having ascertained* that the bag belonged to a foreigner, felt completely comfortable about phoning. Tom was lucky, too - very lucky - that the garbage truck had started its rounds a little later than usual that day.

Later, and finally home after several tiring classes, my friend Tom checked the contents of his bag. Sure enough, everything was there - his watch, his wallet, his sunglasses, and his portable telephone.
